

Tutorial Links and Supporting Resources

Katabatic Project

This document provides links to the tutorial resources created to support Katabatic team members with GitHub workflows and Google Colab setup. These tutorials were developed to reduce confusion, ensure consistency, and help team members confidently follow the correct processes.

All tutorials have already been shared in the **Katabatic Microsoft Teams channel**. Screenshots have also been provided there as evidence of sharing.

Tutorial 1: GitHub Branch and Push Guide

This tutorial explains how to correctly work with GitHub branches and push code to the repository using an individual branch. It covers the basic workflow required for contributing code safely and consistently.

Video Link (Panopto - accessible to anyone with the link):

<https://deakin.au.panopto.com/Panopto/Pages/Viewer.aspx?id=6141b367-f7ff-4117-8e96-b3d500c4d738>

This tutorial is intended to help team members:

- Create and switch to their own branch
- Commit changes locally
- Push updates to GitHub correctly
- Avoid common mistakes when working with shared repositories

Tutorial 2: Katabatic Google Colab Setup and Pipeline Execution

This tutorial demonstrates how to set up the Katabatic project in **Google Colab** and run a complete pipeline. It walks through cloning the repository, installing dependencies, configuring the environment, and executing the pipeline end to end.

Video Link (Panopto - accessible to anyone with the link):

<https://deakin.au.panopto.com/Panopto/Pages/Viewer.aspx?id=85c6ab96-7127-4b91-b5f3-b3df00f30faa>

This tutorial helps team members:

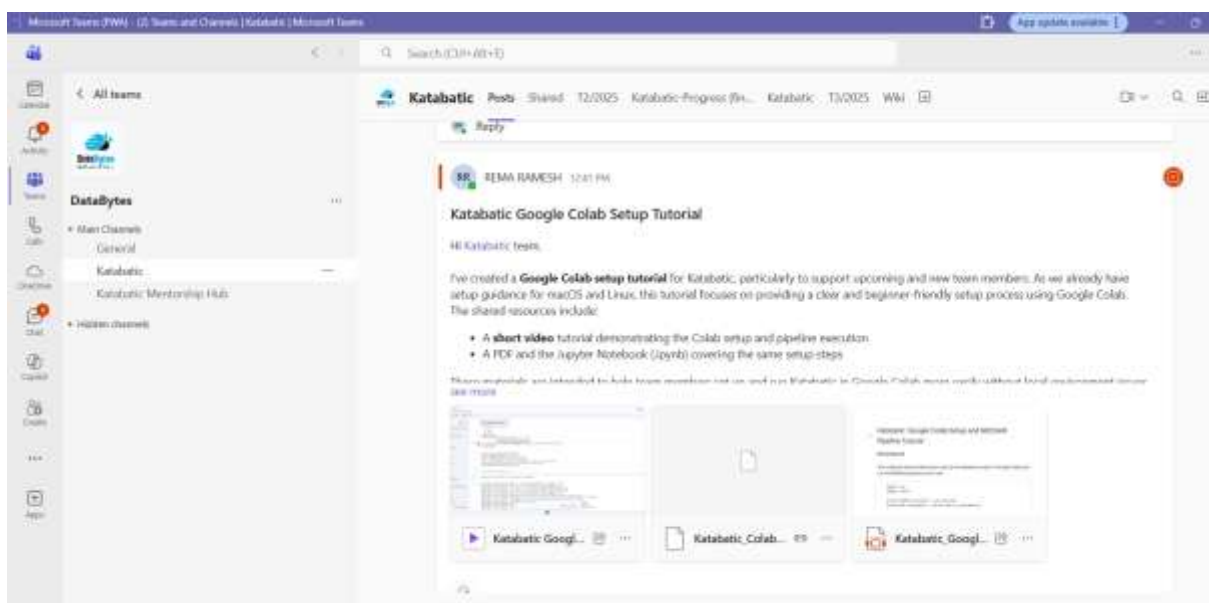

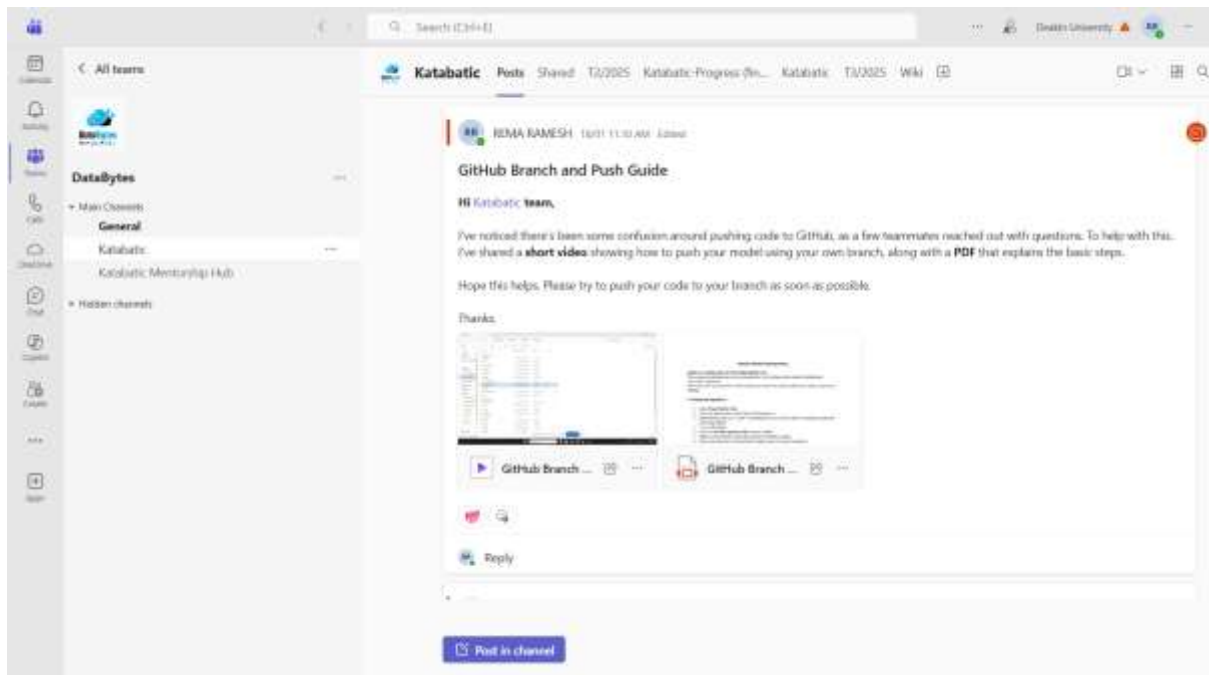

- Set up Katabatic in a cloud-based environment
- Run pipelines without local configuration issues
- Understand the workflow used within the Katabatic project
- Reproduce results consistently

Access and Availability

Both videos have been uploaded to **Panopto** and configured so that **anyone with the link can access them**.

Evidence of Sharing

All tutorial links and supporting screenshots have been shared in the **Katabatic Teams channel** to ensure visibility and accessibility for all team members. These screenshots serve as evidence that the resources were communicated clearly to the team.

These tutorials are intended to support and streamline team workflows. Team members are encouraged to refer to them whenever needed while working with GitHub or running Katabatic pipelines.
