

Bachelor of Data Science

Evidence

This appendix contains selected evidence demonstrating my technical work, communication, teamwork, leadership, and problem-solving activities throughout the Katabatic project. Each item includes a short description of its relevance.

Category 1: Model Development and Technical Work

Evidence 1 - MedGAN Hyperparameter Tuning Update

Screenshot: Teams message sharing tuned hyperparameters and improved results.

This screenshot shows the update I shared with the team after manually tuning MedGAN hyperparameters in the model.py file. I explained the exact values I changed and how this tuning improved the model's performance. This demonstrates my technical contribution to model optimisation and transparent communication of results.

Bachelor of Data Science

Evidence 2 - My Individual MedGAN Model Results

This screenshot shows the TSTR results I generated for the MedGAN model across all five datasets. These are my individual scores for one of the three models I worked on, and I have similar results recorded for my other models as well. This demonstrates my individual contribution to model training, evaluation, data organisation, and result interpretation, which formed a core part of my data science responsibilities in the project.

Category 2: Team Coordination and Project Administration

Evidence 3 - Model Selection Coordination With Team Members

This screenshot shows my message to a team member requesting their chosen model for Task 2.1. Many members had not responded in the main Katabatic channel, so I individually contacted **around 13 members-** (ANIRUDDHA BORSE, SATHIN CHAMIKARA POLWATHTHA SIRIYALAGE, SUHANA TUNIO, NEEYATI NABIN, FAISAL MUJAHID MOHD, BARBIE MAHAJAN, AIDAN PAGE, HUDSON

Bachelor of Data Science

BUI,AYMAN ALI, VICTOR NYANGAU NYABOTE, RISHI GOYAL, MOHAMMAD SHARIQ,ROHANN GABRIEL NAMAY)- to collect their model selections and ensure our submission was completed on time. Although I contacted multiple people, **only six example screenshot is included**, as this sufficiently demonstrates the work completed.

Bachelor of Data Science

Evidence 4 - GitHub Access Follow-Ups for Repo Onboarding

This evidence shows how I followed up individually with members who had not submitted their GitHub usernames for repository access. At least six members (**BARBIE MAHAJAN, RISHI GOYAL, MOHAMMAD SHARIQ, ANIRUDDHA BORSE, FAISAL MUJAHID MOHD, SUHANA TUNIO**) had not replied in the group channel, so I contacted them privately to ensure they were added to the Katabatic repo. **Five example screenshots are included**, which demonstrate my proactive role in onboarding team members and keeping everyone connected to the project infrastructure.

Bachelor of Data Science

Category 3: Peer Support and Technical Guidance

Evidence 5 - Supporting a Member Who Was Lost in the Initial Weeks

This screenshot shows a conversation with a team member who had not attended the earlier meetings and was unsure how to begin. I asked him to call because it was too much to explain through chat from the start. During the call, I walked him through the project objective, the overall workflow, each member's responsibilities, and how our model groups were structured. This demonstrates my leadership, clarity in communication, and willingness to support team members who needed guidance.

Evidence 6 - CTGAN Results Discussion and Technical Support

Bachelor of Data Science

This screenshot shows a conversation with a teammate who reached out and asked for a meeting to clarify his CTGAN results and understand the benchmark expectations. I arranged a short session where I explained the evaluation metrics and helped him interpret the outputs correctly. This demonstrates my ability to support others in understanding model behaviour and strengthening their technical confidence.

Evidence 7 - One-on-One Support Session With Vanshika

This screenshot shows a one-on-one session where I helped a teammate resolve model issues and also discussed leadership ideas. This demonstrates my continued peer support and contribution to team improvement.

Bachelor of Data Science

Evidence 8- Onboarding a Team Member Who Joined Late

This screenshot shows a conversation with a teammate who joined the project late and needed help understanding what was happening in Katabatic. She contacted me privately and asked if we could call, because she was confused about the setup and the project flow. I explained the entire context over the call - including the project objective, the model selection process, GitHub access steps, expected tasks, and how to join the team's workflow. This demonstrates leadership, clear communication, and my initiative in ensuring new team members are fully onboarded and included.

Evidence 9 - Helping a Teammate Resolve TensorFlow/Poetry Installation Issues

This screenshot shows a conversation where a teammate reached out after facing installation failures related to the tensorflow-io-gcs-filesystem package. I shared my own error screenshot and explained how I had diagnosed the issue on my system. This demonstrates my technical problem-solving skills and my willingness to support teammates with setup issues essential for running the Katabatic models.

Bachelor of Data Science

Category 4: Documentation and Environment Setup

Evidence 10 - Windows Environment Setup Guide Shared With the Team

This screenshot shows the Windows Setup Guide PDF that I created and tested on multiple Windows laptops to ensure accuracy. I shared this guide in the Katabatic channel to help the entire team easily set up Poetry, PowerShell, and the environment. This evidence demonstrates documentation skills, initiative, and problem-solving to assist the whole project team.

Bachelor of Data Science

Category 5: Leadership and Project Planning

Evidence 11 - Leadership Team Meeting Participation

This screenshot shows my active participation in a leadership meeting where we discussed team progress, upcoming deadlines, and planning for the next group assignment. We also discussed ideas for the next company's fortnightly meeting and presentation structure. As a project lead, I opened the meeting with open-ended questions, a checklist, and space for everyone to share their ideas. So far, we have held **two** leadership meetings on Saturdays, and I have attended and contributed to both, helping guide discussions and support team decision-making.

Bachelor of Data Science

Evidence

Category 1: GitHub Repository Creation and Version Control

Evidence 1.1 - GitHub Repository Structure, Branching, and Commit History

Source of evidence: Git repository structure, branch list, and commit history screenshots.

Description:

This evidence demonstrates my role in **creating and managing the Katabatic team GitHub repository**, including maintaining the repository structure, enabling branch-based collaboration for multiple team members, and contributing regular commits. It shows effective use of **version control**, **collaborative workflows**, and **professional software development practices** to support team contributions throughout the project.

Category 2: Team Support and Knowledge Sharing via Microsoft Teams

Evidence 2.1 - GitHub Branch and Push Tutorial Shared with the Team

Source of evidence: Microsoft Teams post, shared tutorial video, and PDF guide.

Link : [GitHub Branch & Push Tutorial.mp4](#)

Description:

This evidence demonstrates my role in **supporting the Katabatic team through clear technical guidance** by creating and sharing a GitHub branch and push tutorial via Microsoft Teams. The post includes a short instructional video and a PDF guide to help team members understand branch-based workflows and successfully push their code. This contribution reflects my leadership in **knowledge sharing, technical mentoring**, and proactive communication to support team progress.

Attached evidence:

- Screenshot of Microsoft Teams post showing the GitHub branch and push guide, including the shared video and PDF.
- This evidence includes my Microsoft Teams channel posts where I shared updates, and resources with the Katabatic team to support collaboration and project progress.

GitHub Branch and Push Guide

Hi Katabatic team,

I've noticed there's been some confusion around pushing code to GitHub, as a few teammates reached out with questions. To help with this, I've shared a **short video** showing how to push your model using your own branch, along with a **PDF** that explains the basic steps.

Hope this helps. Please try to push your code to your branch as soon as possible.

Thanks,

Bachelor of Data Science

Category 3: Model Implementation and Evaluation Results

Evidence 3.1 - Implemented Models, Synthetic Data Outputs, and Evaluation Results

Source of evidence: GitHub model directories, synthetic data folders, and TSTR evaluation result files.

Link to my branch : <https://github.com/katabatic-mentorship/katabatic-mentorship-repo/tree/rema>

Description:

This evidence demonstrates my implementation and execution of multiple synthetic data generation models, along with the generation of **synthetic datasets** and corresponding **evaluation results**. The attached folders show independently implemented model directories, structured synthetic data outputs for multiple datasets, and recorded TSTR evaluation results saved as CSV files. This evidence reflects my end-to-end contribution to **model implementation, experimentation, and performance evaluation** within the Katabatic project.

Attached evidence:

- Screenshot of katabatic/models showing implemented models
- Screenshot of synthetic_rema showing generated synthetic datasets
- Screenshot of results_rema showing TSTR evaluation CSV files

Bachelor of Data Science

This screenshot shows the GitHub interface for the `katabatic-mentorship` repository, specifically the `katabatic / models` directory. The left sidebar displays the file tree with the `models` folder selected. The main content area shows a commit by `RemaR224` titled "Add ctabgan_plus_rema model". Below the commit message, a table lists the files in the directory.

Name	Last commit message
..	
CopulaGAN_rema	Reverts independently implemented models with _rema suffix
SynthPop_rema	Reverts SynthPop to SynthPop_rema
art_rema	Reverts independently implemented models with _rema suffix
codi	Import Katabatic codetbase (include data/checkpoints)
ctabgan_plus_rema	Add ctabgan_plus_rema model
ctgan	Import Katabatic codetbase (include data/checkpoints)
forestdiffusion_rema	Reverts independently implemented models with _rema suffix
ganblr	Import Katabatic codetbase (include data/checkpoints)

This screenshot shows the GitHub interface for the `katabatic-mentorship` repository, specifically the `synthetic_rema / car` directory. The left sidebar displays the file tree with the `car` folder selected. The main content area shows a commit by `RemaR224` titled "Add synthetic_rema". Below the commit message, a table lists the files in the directory.

Name	Last commit message
..	
art	Add synthetic_rema
codi	Add synthetic_rema
copulagan	Add synthetic_rema
ctabgan_plus	Add synthetic_rema
ctabgan_plus_encoded	Add synthetic_rema
ctgan	Add synthetic_rema
decaf	Add synthetic_rema
forestdiffusion	Add synthetic_rema
ganblr	Add synthetic_rema
maf	Add synthetic_rema
medgan	Add synthetic_rema
pategan	Add synthetic_rema
privbayes	Add synthetic_rema

Bachelor of Data Science

Category 4: Technical Contribution and Model Sharing

Evidence 4.1 - Model Sharing and Successful Execution by Teammates

Source of evidence:

Microsoft Teams chat screenshots and shared execution outputs.

Description:

This evidence shows that I shared my newly implemented synthetic data generation models developed from scratch with teammates targeting Pass and Credit outcomes, enabling them to independently run and test the models successfully.

Teammates Supported:

- Ayman Ali
- Faisal Mujahid Mohd
- Barbie Mahajan
- Neeyati Nabin
- Michelle Halls
- Victor Nyangau Nyabote
- Rohann Gabriel Namay

Attached evidence includes:

Bachelor of Data Science

- Screenshots of shared model code
- Messages confirming successful execution and results

Bachelor of Data Science

The screenshot shows a code editor with three files open: `_init_.py`, `adapter.py`, and `models.py`. Each file contains Python code related to a diffusion model. Below the files, a text box states: "These three files come under the utils folder in the diffusionforest folder".

COMPANY FORTNIGHT MEETING

Chat Shared

Meet now

- These dimensions demonstrate that different models optimise utility and fairness differently, making a single 'best' model impractical

SUDE 2: Utility-Fairness Insights from TSTR Evaluation

- Katabatic uses Train-on-Synthetic, Test-on-Real (TSTR) as a core mechanism to analyse utility-fairness trade-offs
- TSTR evaluates synthetic data based on real downstream performance, providing a practical measure of utility
- Results indicate that models achieving high fairness or balance do not always maximise downstream utility
- Conversely, models with strong utility performance may amplify bias or imbalance present in the original data
- Evaluation across datasets reveals that utility-fairness trade-offs vary significantly depending on data size, feature type, and imbalance
- This evaluation strategy enables Katabatic to identify models that provide acceptable utility while maintaining fairness constraints

SUDE 3: Dataset-Driven Utility-Fairness Behaviour

- Katabatic evaluates models on diverse datasets to observe how utility and fairness interact under different data conditions
- Categorical and high-cardinality datasets expose fairness challenges related to minority or rare categories
- Numerical-heavy datasets emphasise utility through distribution and correlation preservation
- Mixed-feature datasets reflect real-world scenarios where utility and fairness objectives often conflict
- Observations show that model performance along utility and fairness dimensions is highly dataset-dependent
- These findings confirm that model selection must be guided by dataset characteristics and fairness-utility priorities
- This directly supports Katabatic's decision-driven, multi-model framework rather than a single-model solution

Category 7: One-to-One Technical Support and Knowledge Sharing

Evidence 7.1 - Individual Support Sessions and Technical Guidance

Source of evidence:

Microsoft Teams one-to-one meeting screenshots, screen-sharing sessions, chat messages, and recorded calls.

Description:

This evidence demonstrates my individual technical support and knowledge-sharing contributions through multiple one-to-one sessions with team members. I provided hands-on guidance on development environment setup, Google Colab configuration, GitHub branch management, and troubleshooting model execution issues within the Katabatic project. These sessions supported peers in independently running models, resolving errors, and contributing effectively to the shared codebase.

Participants supported:

- **Nirmal Subashana Kalanchige** - GitHub setup, code execution, and results integration
- **Faisal Mujahid Mohd** - debugging runtime and model execution issues
- **Barbie Mahajan** - repository setup, Git issues, and execution support
- **Trinh To** - Google Colab environment setup and running models
- **Sathin** - troubleshooting errors, understanding pipeline flow, and execution guidance

Attached evidence:

- Screenshots of one-to-one Microsoft Teams calls
